

OFF-BOARD

Diag Studio

The OEM and aftermarket diagnostic application, and the configuration model behind the fleet.

Diag Studio reads ECU fault codes, runs diagnostic sequences and logs vehicle health, and holds one structured model of every platform you maintain: vehicles, variants and individuals, with the hardware and software they share.

CAPABILITIES

At the vehicle

- Read and interpret ECU fault codes, with the context to act
- Repeatable diagnostic sequences for development, end-of-line and field service
- Vehicle health logged over time for fleet, warranty and service decisions
- Supplier, spare-part and obsolescence profiles across the network

Across the fleet

- One model down to part number and serial
- Software-to-hardware dependencies checked in the model
- Baselines per individual; every change reviewed and recorded
- Change impact surfaced before the work order goes out
- Defence: ALM/PLM audit support for decades of traceable configuration

TECHNICAL

PROTOCOLS	UDS (ISO 14229) · DoIP (ISO 13400) · SOVD
VEHICLE ACCESS	Vehicle communication interface (VCI) · software over the air
DEPLOYMENT	Workshop application; modules licensed and reused into cloud services

LICENSING

A licence with adaptation and integration, a reuse licence for functionality you already run, or the foundation of a system Diadrom builds and maintains. Licences are perpetual or term-based, agreed per programme. Source-code escrow is available. Support and further development run under a maintenance agreement.

60+

MARKETS ON ONE WORKSHOP SYSTEM: NDS FOR NEVS AND SAAB

PROVEN IN

NEVS · NDS

Built on Diag Studio and rolled out to every NEVS and Saab workshop in 60+ markets: fault-code read-out, fault tracing, software download.
